System Revisions & Testing

Dr. Solis revisions | What changed, where to find it, and how to test it

Deployment status: The changes are local and are not yet deployed. For live testing, apply the database migration first, then deploy the backend and frontend. Your thesis papers were not edited.

1. External Grantor Type

Changed: Grantors can be marked Internal or External. This is separate from Government / Private / Others.

Where: Admin > Grantor Management > New Grantor, or View an existing grantor.

How to test:

1. Create a test grantor and select External.
2. Open its details afterward.
3. Confirm External was saved and its classification stayed unchanged.

Expected result: The grantor retains the External type without changing its classification or normal grantor permissions.

2. Automatic Scholarship Assignment

Changed: Official roster records are checked during import, account activation, and verified student login.

Where: The existing grantor/admin Excel roster import, then Student > Scholarships.

How to test:

1. Create a test scholarship under the grantor.
2. Import a roster containing the test student's exact Student ID and matching name.
3. For an active student, check Scholarships after import/login.
4. For a new student, finish email confirmation and account approval first.

Expected result: One scholarship assignment appears. Repeating the import or login must not create another assignment.

Assignment safeguard: The academic cycle and existing awards are also checked. Fuzzy name similarity alone does not authorize a scholarship.

Protection & Conflict Tests

3. Multiple-Scholarship Protection

Changed: A current-semester award cannot be silently replaced by another award.

Where: Student scholarship applications and official roster import.

How to test:

1. Give a test student a current-semester scholarship.
2. Try applying to another scholarship or importing a competing award.

Expected result: The second application or assignment is blocked or flagged. The original award remains intact.

A completed scholarship workflow still counts as an award within the same semester. Explicit previous-semester completed records remain history. Cancelled, terminated, or inactive awards do not count as active awards; other eligibility checks still apply.

4. Full Admin Conflict Review

Changed: Conflicts require verification, a written reason, and an audit record.

Where: Admin > Scholarship Programs > Warning. The same controls are available inside the roster import window.

How to test:

1. Import a mismatched name or competing scholarship record.
2. Open Warning as a Full Admin.
3. Leave the reason empty: resolution should stay disabled.
4. Enter a meaningful reason and confirm the appropriate action.

Expected result: An existing award can be kept, not overwritten. Reviewers cannot access the resolution controls.

5. Pending Applications and History

Changed: When an official roster confirms an award, competing current-semester pending applications are archived and their reserved slots are released.

Where: Student > Scholarships and the existing administrator application, roster, and history records.

How to test:

1. Start with two pending applications.
2. Import an official award for one of them.
3. Check both applications, available slots, uploaded files, and history.

Expected result: The matching application keeps its ID and progress. The competitor is archived. Uploaded files and historical records remain preserved.

Previously checked locally: 348 backend tests, 27 database cases, frontend checks, and synthetic desktop/mobile browser checks passed. These results are not a claim that live deployment has already been tested.

Next step: Apply 20261023070747_solis_cycle_aware_roster_reconciliation.sql after earlier migrations, then deploy the backend and frontend. Detailed instructions: docs/Solis_System_Revision.md.
