Dr. Romel Testing Checklist

Student, Grantor, and Admin | Manual testing procedures

First, apply the migration and deploy the updated backend and frontend in your test environment. Use test accounts and non-sensitive documents.

This is a checklist of tests to perform and their expected results, not a record that these manual tests have already passed.

Student Side

Test	What To Do	Expected Result
Document downloads	In Profile > Document Vault, download COR, ROG, Student ID, and Application Profile.	Password dialog appears before downloading.
Password requirement	Try Continue without checking the acknowledgment.	Continue stays disabled.
Protected files	Save the password, download, then open with no password, a wrong password, and the correct password.	Only the correct password opens the PDF or ZIP contents.
Document previews	Preview the uploaded documents.	Preview works without a download-password prompt.
Encrypted re-upload	Upload a protected COR/ROG PDF. Enter a wrong password, then the correct one.	Wrong password is rejected; correct password proceeds through normal document validation.
Scholarship files	Download SOE, application materials, and other requirements.	Sensitive files are protected; empty public templates remain unchanged.
Cancellation	Cancel an SOE download at the password dialog.	No file downloads and scholarship tracking must not advance.

For ZIP downloads, extract the file using an AES-compatible archive application before opening it.

Grantor Side

Test	What To Do	Expected Result
Applicant documents	Preview and download an authorized applicant's documents.	Preview works normally; download requires saving a password.
Applicant reports	Filter applicants, preview the report, then export PDF and CSV.	Preview matches the filters; PDF is encrypted and CSV arrives in an encrypted ZIP.
Record consistency	Compare preview records with the decrypted/extracted export.	Counts and filtered records agree.
Access restriction	Using controlled test records, attempt to access another grantor's applicant document.	Access is denied.

Admin Side

Test	What To Do	Expected Result
Pending Account gating	Download signup documents without previewing them.	Downloading alone does not enable Approve Account.
Actual previews	Preview every applicable signup document for an email-confirmed test account.	Existing approval requirements are satisfied normally.
Requirements documents	Preview and download required documents, other requirements, and signed SOE.	Previews remain usable; downloads are protected.
Report sections	Export from Students, Grantors, Scholarships, Requirements, and Report Generation.	Correct filtered data; protected PDF/CSV; landscape branding remains full-width.
Export history	Preview a report, then export it once.	Preview creates no export-history entry; successful export creates one.
Reviewer restrictions	Repeat with a restricted reviewer account.	Existing permission restrictions remain enforced.

Final Checks

- Cancel the password dialog: no download.
- Double-click Continue: one download preparation, not duplicates.
- Download again: a different password.
- Check Root Admin > Logs & Audit: preparation events appear, without passwords.
- Test desktop/mobile and light/dark modes.
- For signed SOE, compare the original with the file extracted from the ZIP: the bytes must remain identical.

Recommended Starting Order

Student COR download > Grantor applicant report > Admin Pending Account preview gating. These give you the quickest confirmation that the main workflows work.
